Elation Brings Broadcast-Ready Lighting Innovation to IBC 2026

September 11–14, 2026 | IBC 2026 | Stand 12.C60 | Amsterdam

Elation invites lighting professionals to discover the latest in broadcast-ready lighting at **IBC 2026, September 11–14** in Amsterdam. Visit **Stand 12.C60** to see why broadcasters and production professionals worldwide trust Elation for lighting solutions that combine exceptional color, quiet operation, and the flexibility demanded by today's fast-paced production environments.

Elation will showcase an award-winning portfolio of LED lighting solutions optimized for broadcast, including the popular KL "Key Light" Series, as well as the latest innovations from the Paragon, Fuze, Rebel, and SÖL families.

KL Series: The Key to Broadcast-Quality Lighting

At the heart of the Elation display is the [KL Series](#), a comprehensive family of broadcast-quality fixtures designed to provide a versatile lighting foundation for studios, multi-camera productions, and other noise-sensitive environments. The series includes Fresnel, Par, Panel, Profile, Batten, and Cyc fixtures in tunable-white and full-color configurations.

FOR IMMEDIATE RELEASE

KL luminaires feature Elation's TruSpectrum additive color system, delivering a rich full-spectrum output with deeply saturated colors and uniform color performance across fixture types. Combined with precise color rendering and durable construction, KL fixtures give lighting professionals the flexibility to create consistent, high-quality looks across a production.

Paragon: One Fixture, Multiple Roles

[Paragon](#) brings exceptional versatility to any broadcast environment. These LED Profile fixtures combine multiple fixture roles in a single adaptable design, making it easy to change functions from production to production, or even within the same broadcast.

While interchangeable Profile, Fresnel, and PC Beam lenses provide application flexibility, at its core is a TruTone variable CRI LED engine that delivers both high output and excellent color rendering. With seamless adjustment from CRI 73 to CRI 93, TruTone allows users to find the ideal balance between lighting intensity and color accuracy for different applications.

Fuze: High Performance, High Value

Elation will also showcase new additions to its high-performance, high-value [Fuze](#) Series, including the Fuze Wash 250 and Fuze Wash 500 LED Fresnel moving heads. Remarkably silent with wide zoom, high CRI, and flawless dimming, they deliver the velvety, homogeneous field that lighting sets require to make performers and scenery look their best.

SÖL: Creative Blinder Power

The groundbreaking [SÖL](#) LED Blinder Series brings a new level of flexibility to high-output creative lighting. Designed to link, scale, and adapt, SÖL fixtures combine sleek housings, powerful output, and flexible configurations to create dynamic visual effects while serving as powerful statement pieces in modern stage and broadcast environments.

Rebel: Rugged Performance for Demanding Environments

Elation will round out its IBC showcase with new luminaires from the bold [Rebel](#) Series, a family of workhorse fixtures engineered for high performance and demanding conditions.

The Rebel Dartz delivers an extremely bright LED beam FX in a fully weather-protected design, while the Rebel Line 16 is an IP65-rated linear tilt bar powered by high-output 60W RGBL LED engines. Both fixtures bring powerful creative capabilities to productions where output, flexibility, and rugged performance are essential.

Visit Elation at **Stand 12.C60** at IBC 2026 and discover lighting solutions engineered to perform on today's most demanding productions.
