Elation KL Panel™ highlights elegance of classic Mercedes-Benz vehicles

Mad Music Event Technology installs full-color LED softlight in Mercedes-Benz Classic Center

The Mercedes-Benz Classic Center in Fellbach, Germany, is the official Mercedes-Benz showcase for classic cars and is a must-visit for any car enthusiast. It offers original parts, repairs, restoration and information for historical Mercedes-Benz vehicles that have been out of production for at least 15 years. Mad Music Event Technology GmbH of Stuttgart was called on to upgrade a portion of the vehicle lighting at the Classic Center and chose a large number of full-color Elation Professional KL Panel™ LED softlights for the job.

Using a highly efficient 295W RGBW + Lime + Cyan LED array, the KL Panel creates wonderfully soft white or full-color washes of up to 24,000 lumens at a 100° half-beam angle. According to Mad Music CEO Mathias Bremgärtner, the decision to go with the KL Panel was because of the "very good options for color temperature adjustment, the very good CRI value, the excellent homogeneous coverage and the exact color rendering of the vehicle paint."

The KL Panel, with its flexibly adjustable color temperature from 2,000 to 10,000K, meets the high performance and color quality requirements of film and television but is just at home in studio and streaming applications or, as in this case, for the true-to-color lighting of exhibits in museums and showrooms. Virtually silent in operation, adjustable and removable 8-leaf barn doors are included for more precise illumination and less light spill.

FOR IMMEDIATE RELEASE IMMEDIATE RELEASE

The color rendering of the KL Panel softlight is of the highest quality with a CRI above 95. Additional color tuning is possible through a green shift adjustment and a virtual gel library. The KL Panel is energy efficient, consuming only 295W of max power, and offers other benefits of LED like greater reliability, a long LED life rating and little maintenance for a lower cost of ownership.
