Obsidian Control Systems Debuts New Website Optimized for the Growing Obsidian Community

Obsidian Control Systems is pleased to announce the launch of its newly redesigned website at obsidiancontrol.com. The refreshed site features an uncluttered layout and more responsive design with improved navigation and enhanced functionality. The result is a site that simplifies access to essential information while delivering a more intuitive and engaging experience for the growing community of Obsidian users worldwide.

“Our new website not only presents product information in a more visual way but also makes it easier for visitors to explore the Obsidian ecosystem and understand how ONYX and NETRON provide a powerful backbone for any project, venue, or event,” said Koy Neminathan, Business Development Director at Obsidian Control Systems. “The website upgrade marks another important step as we continue to serve our users and grow the Obsidian community around the globe.”

The new-look website is easier to navigate with an adaptive design that works great whether viewed on a computer, phone or tablet. A key highlight is the Platforms section, which puts the technology behind ONYX, NETRON, and DYLOS front and center, giving users a clearer view of how these systems work together.

The website also introduces a dedicated Training tab, offering a comprehensive overview of in-person and online training opportunities, along with a growing library of video tutorials.

“Training assets have received an increased focus,” comments Neminathan. “Users can now learn more about how to use our products through live online sessions, global in-person events, and video tutorials. The new distributor page also allows users to instantly find their local trainer, support, or sales contact anywhere in the world.”

A comprehensive Support area provides software downloads, fixture libraries, online documentation, and direct access to the User Forum, a popular space for Obsidian users to share experiences, ask questions, and connect with the community. A new AI chatbot has also been added to the Support page for instant assistance so users can find the answers they need quickly.

The refreshed website showcases Obsidian’s commitment to its ever-growing community, delivering a more intuitive experience and stronger support than ever. Visitors are encouraged to explore the new website and experience the improvements firsthand at obsidiancontrol.com

About Obsidian Control Systems

Obsidian Control Systems offers advanced yet intuitive lighting control products refined by over 30 years of expertise. Powered by the ONYX software platform, Obsidian consoles and PC systems are accessible to both beginners and professionals.
