Elation Satura Spot LED Pro Moving Head Now Shipping

Elation Professional's 300W Satura Spot LED Pro RGBW moving head is now shipping. As bright as a traditional 575W discharge fixture, the Satura Spot LED Pro consumes half as much energy and its long-life LED engine lasts on average 80 times longer than a 575W discharge source.

"We are very excited to have this ground-breaking fixture out to the market," states Elation Sales Director Eric Loader. "While its advanced LED engine produces enough output to make it a viable replacement option for conventional discharge spot fixtures, the beam is also very crisp with an extremely flat field of light, which puts it in a league with the best spot fixtures on the market. Add in the savings in energy and on lamps and it's a hard package to beat."

A full spectrum of saturated colors combines with 13 gobos (6 rotating, 7 static) and variable color temperature control for a wide variety of design options and the fixture is equipped with a host of other design tools that lighting pros would expect from a professional full-featured spot moving head such as a 14-32° zoom, frost filter, 0-100% dimming, 5-100% motorized iris, 3-facet rotating prism with 16 prism macros, motorized focus, and a high-speed electronic shutter/strobe.

Built to endure the trials of life on the road or years of service in a permanent installation, the Satura Spot LED Pro's modular construction makes for easier serviceability while silent movement means it can be used in noise sensitive environments.

The unit is controllable in 3 DMX modes (19/21/25 channel) and a built-in EWDMX wireless DMX receiver allows it to receive DMX signals wirelessly from up to 3,000 feet when sent via an Elation EWDMXT wireless DMX transmitter. The Satura Spot LED Pro is RDM ready and can be operated manually in stand-alone, master-slave or by sound activation.
